

FEATURES

- > Designed for EV applications that require high continuous currents and/or high short circuit withstanding.
- Smallest and lightest 600A contactor on market.
- Hermetically Sealed Designed to meet: UL1604 for Class I & II, Div 2 and Class III for use in hazardous locations, IP67 for temporary water immersion for 30 min, SAE J1171 external ignition protection, and IS08846 for protection against ignition around flammable gasses.
- Stainless steel nuts and brass mounting inserts, for years of corrosion free service.
- > Not position sensitive can be mounted in any position for ease of installation.

APPLICATION NOTES

• No external diodes should be added across the coil.

• Power switching lifecycles are based on <u>current flow</u> from A1(+) to A2(-). For best breaking performance, the contactor should be installed so that current flows from A1(+) to A2(-). There are cases where the contactor will interrupt power in the opposite direction but please contact GIGAVAC to confirm suitability. Direction of current flow is not relevant during make or when flowing on closed contacts. For bi-directional contactors, please contact GIGAVAC.

· Applications with capacitors will require a pre-charge circuit.

• Electrical life rating is based on resistive load with 27µH maximum inductance in circuit. Because your application may be different, we suggest you test the contactor in your circuit to verify life is as required.

• End of life is defined as when the dielectric, insulation resistance or contact resistance exceeds the specifications listed.

Notes & Definitions:

1 50 Mohms after life.

2 Contactor can operate up to 125°C ambient in special cases contact GIGAVAC for details. Limit terminal temperature to 175°C.

3 Customer must provide an external economizer that meets the Pick-up Current, Coil Current, and Pick-up Current Time. Contact GIGAVAC for information on external PWM.
