

## IWR-5

### FIVE CHANNEL WIRELESS RECEIVER

The IWR-5 is a five channel receiver designed to pair with any of the Sensata range of IWT wireless transmitters to form a cost effective replacement of the traditional wired transducers. This offers a low cost solution to inaccessible or expensive installation environments.

The receiver has user selectable voltage or mA outputs corresponding to the calibrated range of the remote Wireless Transducers and 5A rated changeover contacts for alarm functionality.

User channel configuration is possible with the use of the program, IWR-Set, which ensures minimal user set-up time and thus ensures a simple solution to multi-channel pressure & temperature measurement applications. With the standard 0dBI antenna, a line-of-sight range of up to 500 m can be achieved and, using the optional 3dBI antenna, up to 750m (LOS) is achievable.

### Features
